

When the grill is cold, use the scraper tool to clean down the char bars and use the bar lifter tool to remove.

It is important not to use chemical on the bars as it will remove the seasoning which can cause the bars to rust.

Use the flat side of the scraper tool to dislodge any of the carbon from the surface of the plate.

Use a vacuum cleaner to vacuum up the carbon dust from the surface of the grill.

The top cover can be removed for cleaning. Lift it at both the back and the front of the grill to remove.

Please note: If there is a warranty call-out due to a cleaning issue/not following these instructions, the call will be chargeable.
